

Macro Rate Radar — Banco Central do Brasil

Thu 27th August 2026 | XP Inc. Global Macro

Simple monetary-policy rules — the Taylor-rule family relating the policy rate to inflation and the output gap — evaluated on current public data (inflation 4.35% vs a 3.00% objective, r^* 5.00%, output gap +5.20pp), and set against the meeting path the Focus survey of forecasters currently expects. The median of the five rules sits at **14.18%**, 18bp above the current policy setting of 14.00%, with 520bp of dispersion across rules. Taken to the August 2027 meeting, the rule path implies 33bp more tightening than the Focus survey of forecasters currently expects — a divergence that may be worth a closer look. Note: r^* , NAIRU are an assumption for this bloc rather than a published estimate; the prescription moves with it.

THE FIVE RULES — PRESCRIPTION VS THE CURRENT SETTING

Rule	Prescribes	vs policy (bp)	Working
Taylor (1993)	12.63%	-137	$5.00 + 4.35 + 0.5 \times (4.35 - 3.00) + 1.0 \times (+2.60) = 12.63\%$
Balanced approach	15.23%	+123	$5.00 + 4.35 + 0.5 \times (4.35 - 3.00) + 2.0 \times (+2.60) = 15.23\%$
Balanced approach (shortfalls)	10.03%	-397	$5.00 + 4.35 + 0.5 \times (4.35 - 3.00) + 2.0 \times \min(+2.60, 0) = 10.03\%$
Inertial	14.18%	+18	$0.85 \times 14.00 + 0.15 \times 15.23 = 14.18\%$
First difference	14.88%	+88	$14.00 + 0.5 \times (4.35 - 3.00) + (+2.60 - +2.40) = 14.88\%$

Expected path from the BCB Focus survey of professional forecasters (2026-08-21), joined to the published Copom calendar. A survey median carries no term premium and cannot be executed: a positive spread means the rule prescribes a higher rate than economists expect; a negative spread the reverse.

NAIRU	assumed 8.00% — not published for this bloc

Policy rules are illustrative benchmarks, not forecasts: no central bank follows one mechanically, and prescriptions are sensitive to unobservable inputs (the neutral rate, the output gap) that are estimated or assumed.
