

Brazil Production

Brazil in world supply | XP Inc. Global Macro

Where Brazil sits in the global supply of 17 commodities, as of **Fri 21st August 2026**, and who produces its share. Brazil is the world's largest producer of niobium at 90% of global output. Country-level output is taken from the **USDA Foreign Agricultural Service PS&D** balance sheets and the **US Energy Information Administration**; metals, pulp and ethanol are compiled from the **USGS Mineral Commodity Summaries** and the relevant industry associations. Agricultural figures are marketing years, mining and energy figures calendar years, so each line states its own window.

SOYBEANS — BRAZIL 42.1% OF WORLD PRODUCTION

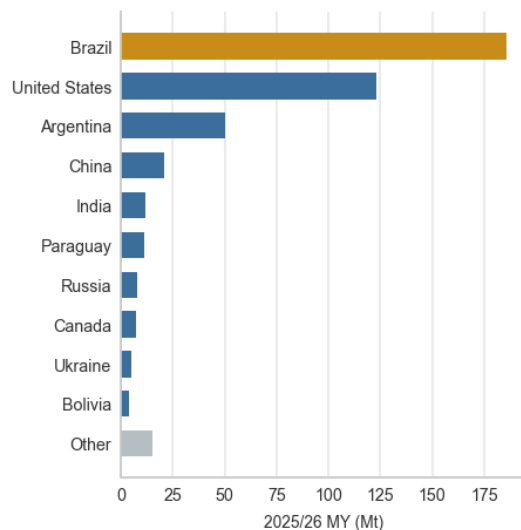

Brazil produced **186.00 Mt** of a world total of **442.25 Mt** in 2025/26 MY, ranking **#1** globally. Source: USDA FAS PS&D.

Company table measures: **Export share**

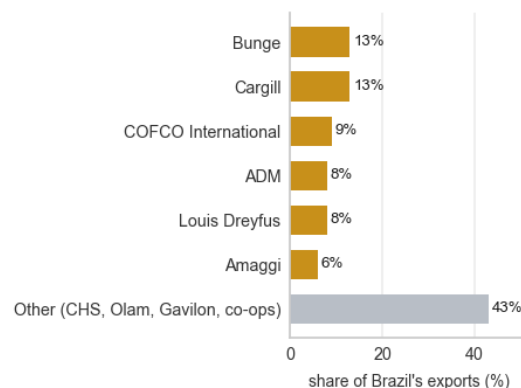

Data quality: **Desk estimate**

This is an export share, not a production share. Brazil's soybean crop is grown by tens of thousands of private farms; no listed company grows a material fraction of it. The largest listed grower, SLC Agricola, is roughly 1% of the national crop. What concentrates is who buys, crushes and ships it - and that is what moves basis.

COFFEE — BRAZIL 37.9% OF WORLD PRODUCTION

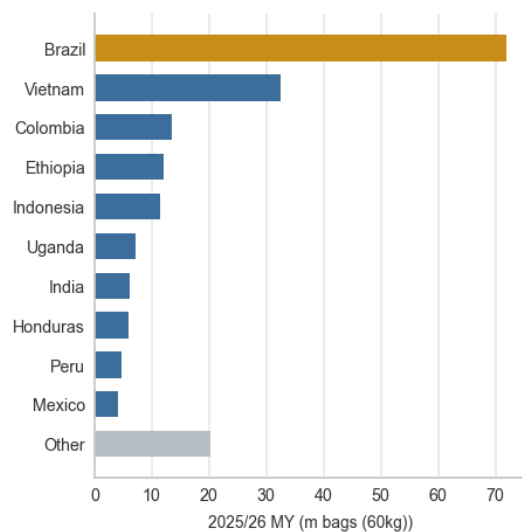

Brazil produced **71.90 m bags (60kg)** of a world total of **189.67 m bags (60kg)** in 2025/26 MY, ranking **#1** globally. Source: USDA FAS PS&D.

Company table measures: **Export share**

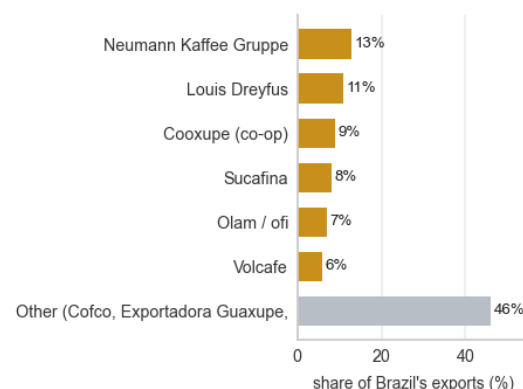

Data quality: **Desk estimate**

This is an export share, not a production share. Brazil's crop comes from roughly 300,000 growers. Cooxupe is a growers' co-operative, so it is the one line here that is genuinely upstream.

Production figures are compiled by the internal Strategy Monitor from published public sources: USDA FAS PS&D, the US Energy Information Administration, the USGS Mineral Commodity Summaries and the relevant industry associations. Company-level splits are compiled from company production reports and sector bodies and were last reviewed on 2026-08-21; where a table is marked a desk estimate it is an approximation, not a reported figure. Each table states what it measures — production, equity share, cane crushed, processing or exports — and these are not interchangeable. Figures are descriptive only and are not a forecast of future output. Company detail for Wood pulp, Chicken, Corn, Crude oil is held in the Strategy Monitor and is available on request.
